

The ENERGY Suite

Tool 6: The Power Plan

Overview:

The Power Plan! The place it all comes together! If you are trying to start here: Stop. Go back. Work through tools 1-5 first. Using information derived from My Energy, the Regulator, the worksheets, and the PIC Tool, autistic or neurodivergent people and/or their teams can create a comprehensive plan for Powering UP! and Powering Down energy levels when there is a mismatch identified on the Energy Meter, or when there will be known mismatches between the person's profile and the environment or activity based on your work with the PIC. The Power Plan has three pages. The first page of the Power Plan is designed to be used as a quick visual reference for authentic and useful activity and environmental accommodations that can support a person's energy regulation, as well as provide a reminder of factors that can trigger dysregulation that should be avoided if possible. Pages two and three detail proactive regulation strategies and reactive regulation strategies. Strategies are organized by type of input (i.e., Sensory/Motor, Information/Routine, and Reflective/Forward Thinking) and their perceived effectiveness in the face of varying degrees of dysregulation (i.e., mild, moderate, extreme).

"GOs" and "NOs" for Learners and their Partners	
DO use this tool for exploration and curiosity.	Do NOT fill this out without putting in the work to create something authentic and individualized.
DO use this tool as a worksheet and be willing to amend it as new information comes to light.	Do NOT fill this form in with "textbook" answers and examples if they do not reflect experience.
DO involve the person in the creation of their Power Plan in any capacity that is accessible to them.	Do NOT use this tool in directive ways that forces compliance or discomfort.
DO share this completed tool with everyone who is a trusted partner providing support for a person.	Do NOT assume the information contained in a person's Power Plan is static. Humans change and grow.

*We are all learners. Learner is one of the most important roles a human can have. Learners are seekers of knowledge and growth. Partners are trusted support providers for learners. Partners seek to understand the perspective and experience of the learner they are supporting. Partners join in the learning process.

The Power Plan

Essential Knowledge Needed for Effective Implementation

Known triggers and challenging contexts that cause dysregulation:
(Reference PIC Tool and My Energy)

Key environmental accommodations and modifications that support regulation:
(Reference PIC Tool)

Signals that support is needed from self or another human:
(Reference My Energy/Signals of Dysregulation)

Types of Energy regulation strategies that are accessible and preferred:
(Reference Developmentally Accessible Regulation Strategy Worksheets)

Sensory Motor

Language / Information

Reflecting / Planning

“Go To” regulation strategies / supports that partners should be aware of:
(Reference MR/SR Worksheet/ PIC Tool)

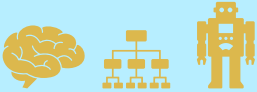

Regulation strategies that have neutral effect on ENERGY (e.g., help MAINTAIN energy levels)
(Reference The Regulator/Power Packs)

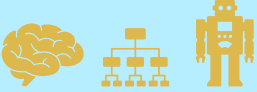

Every Day Non-Negotiable Strategies

(Reference All Day Long, All Day Strong Strategy Worksheet)

Strategies for Anticipated Mismatches in Energy based Upon Triggers / Challenging Context Information

Recovery (from extreme dysregulation) Strategies

	Make sure these factors are considered and, if possible, addressed before other Power Down strategies are implemented.			
Physiological 	Does _____ need to: - eat - go to bathroom - sleep		Every Day ROUTINE Strategies : Situation Specific Strategies:	
Interoception 	Are there needs related to: - allergies / illness - medication - chronic pain			
		1 Level Power DOWN	2 Level Power DOWN	3+ Level Power DOWN
Sensory 	Sensorimotor/ Behavioral			Take a break / ask for space
Motor 				
Cognitive 	Language / Information ... Reflective / Metacognitive	Ask for / give help	Ask for / give break	Access to multimodal communication
Communication 		Use Energy Meter	Use Energy Meter	Visual choices of intense sensorimotor activities
		Use Regulator 2.0	Use Regulator 2.0	Give space and time for sensorimotor strategy use
Social
